MATLAB EXPO

Hands-On Designing for Every Ear Workshop:
Engineering Hearing Assistive Tech for Edge Compute

Hardware and Software Requirements

To participate in the workshop, you need:

1. A laptop
2. Google Chrome browser
3. A MathWorks account

You will be provided with a temporary workshop license that will give you access to all products used in the workshop, as well as the workshop exercise files.

Please download a copy of this document to be able to click on the links provided.

Need Help?

If you run into any issues completing the steps below, please use the Q&A section in your MATLAB Expo session to ask the questions. The team of remote TAs will also be available to provide assistance throughout the workshop exercises.

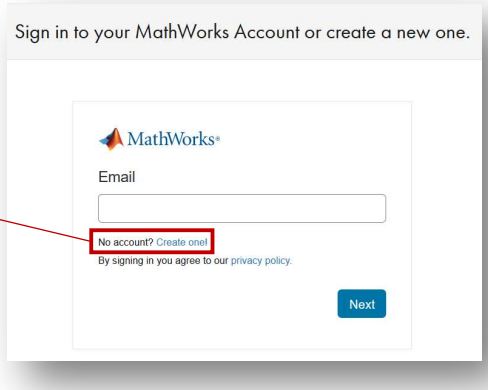

Step I. Set Up Your MathWorks Account

If you don't have a MathWorks account, you need to create one to get access to MATLAB Online and the material for this event. You will need access to your email on the machine you are using to create the account.

1. In Google Chrome, go to: https://www.mathworks.com/mwaccount/ and click **Create one!** next to No Account?:

2. Fill out the form and click **Create**. Follow the directions for verifying your email address.
3. To complete your registration, click the link in the verification email and fill out the form.
   You must check the Online Services Agreement box.
   You may leave these fields blank: Activation Key or License Number, Sales rep contact

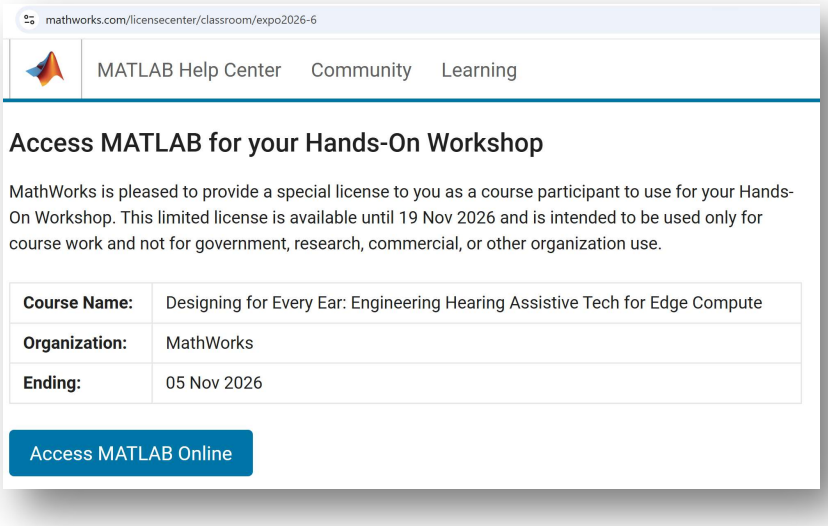

-> Next page for Steps II, III, and IV

Step II. Activate the Workshop License

The workshop uses MATLAB Online. You must activate the workshop license to participate. You can activate this license starting from the day of the workshop up to a week after the workshop date.

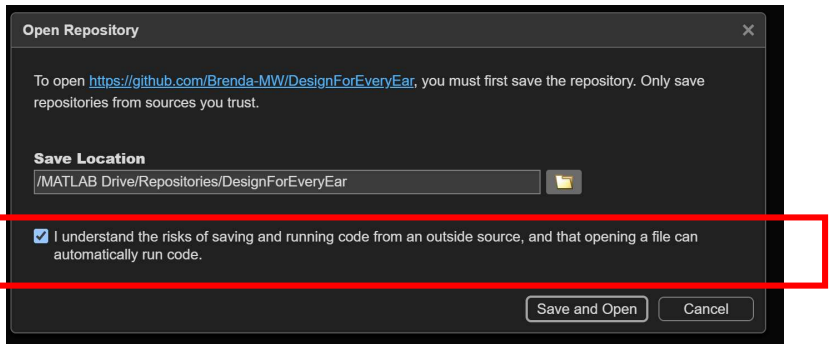

1. Navigate to this address in Google Chrome:
   https://www.mathworks.com/licensecenter/classroom/expo2026-6
   If you are not already logged in, do so.
2. Click **Access MATLAB Online**.

Step III. Access Exercise Files

MATLAB Online will try to port your workshop files from GitHub automatically. You will see a dialog pop-up for saving and opening the repository of files.

1. Click on the checkbox to accept outside source code.
2. To access the files, hit “Save and Open”.

Step IV. Verify Your Environment

To verify that your environment is correctly set up for the exercises:

1. Run the command below in the MATLAB Online Command Window:

```
>> DesignForEveryEar_Setup
```

2. Confirm that the **welcome message** is displayed.

Congratulations! You are all set!

Step V. Launch Terminal for AI Tutor

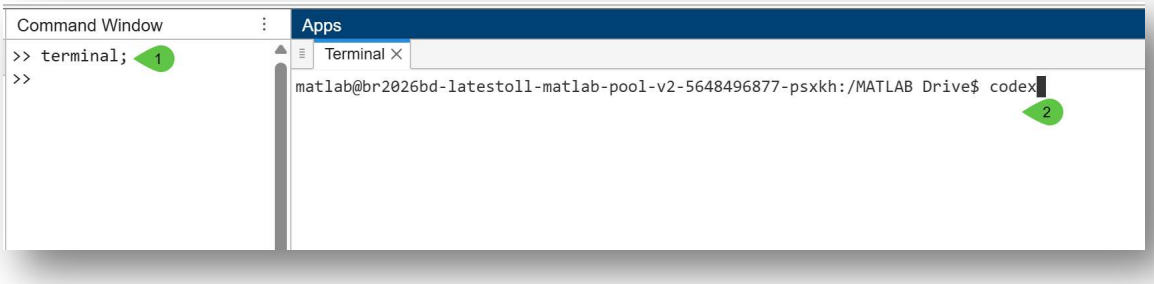

The AI coding agent is accessible via Command Line Interface (CLI) in a Terminal window.

1. Run the command below in the MATLAB Online Command Window:

```
>> Terminal
```

2. Confirm that the **Terminal** App is displayed. At the prompt line, now use codex command to launch the AI coding agent.

```
matlab@pool:/MATLAB Drive$ codex
```

Codex home folder is ephemeral – codex sessions are not saved if MATLAB online starts a new one.

3. Tell the tutor to read this guide and where you are in the Codex window. For example,

> ***Read `Knowledge/Guide.md` and be my tutor. I'm on Exercise 1.***

MATLAB EXPO

Notes on the AI-assisted Workflow

You are receiving access to a MATLAB Online environment for the upcoming Agentic AI Workshop.

This workshop includes tools that use AI coding agents to generate, modify, and execute code. Before accessing the environment, please review the following guidelines:

Responsible Use

- Treat all AI-generated outputs as drafts. Review, run, and test before relying on them.
- You, not the AI system, are responsible for the code you use or share.
- Do not run commands or accept changes you do not understand.

Security & Data Guidelines

- Do not enter confidential, proprietary, or personal data into prompts.
- Do not paste credentials, API keys, or sensitive information.
- Use only data that is approved for workshop or demonstration purposes.
- Do not use this environment for production work.

Acceptable Use

You agree not to use the workshop environment to:

- Develop harmful, illegal, or unsafe applications
- Circumvent security controls or access restrictions
- Generate misleading or inappropriate content

Important Notes

- This environment is provided for training purposes only.
- AI outputs may be inaccurate or incomplete.
- Usage may be subject to limits (for example, compute or token usage).

Please consider sharing your thoughts at the end of the workshop.
